

STARBOARD Proto.

POWER YOUR ADVENTURES, ANYWHERE, ANYTIME

Up to:
 *50amp charge from alternator
 *400w Solar charging,
 *1200w Inverter AC output
 Always have power on demand
 ready for fulltime adventure.

VICTRON POWERED

Victron VE Bluetooth interconnects all devices allowing intelligent power communication between devices = 100% accurate state of charge every time, Remote connection support and live over the air updates

DESIGNED AND BUILT BY AUTARKY USA

Hand assembled by ABYC installers in Fallon Nevada at Autarky Expedition Vehicles headquarters

POWER THAT NEVER FADES

The Nova is a revolutionary, compact power solution purpose-built for rugged mobile applications. At its core is our proprietary Starboard backboard — a vibration-resistant mounting platform developed in-house by Autarky specifically for the demands of the overland and expedition industries.

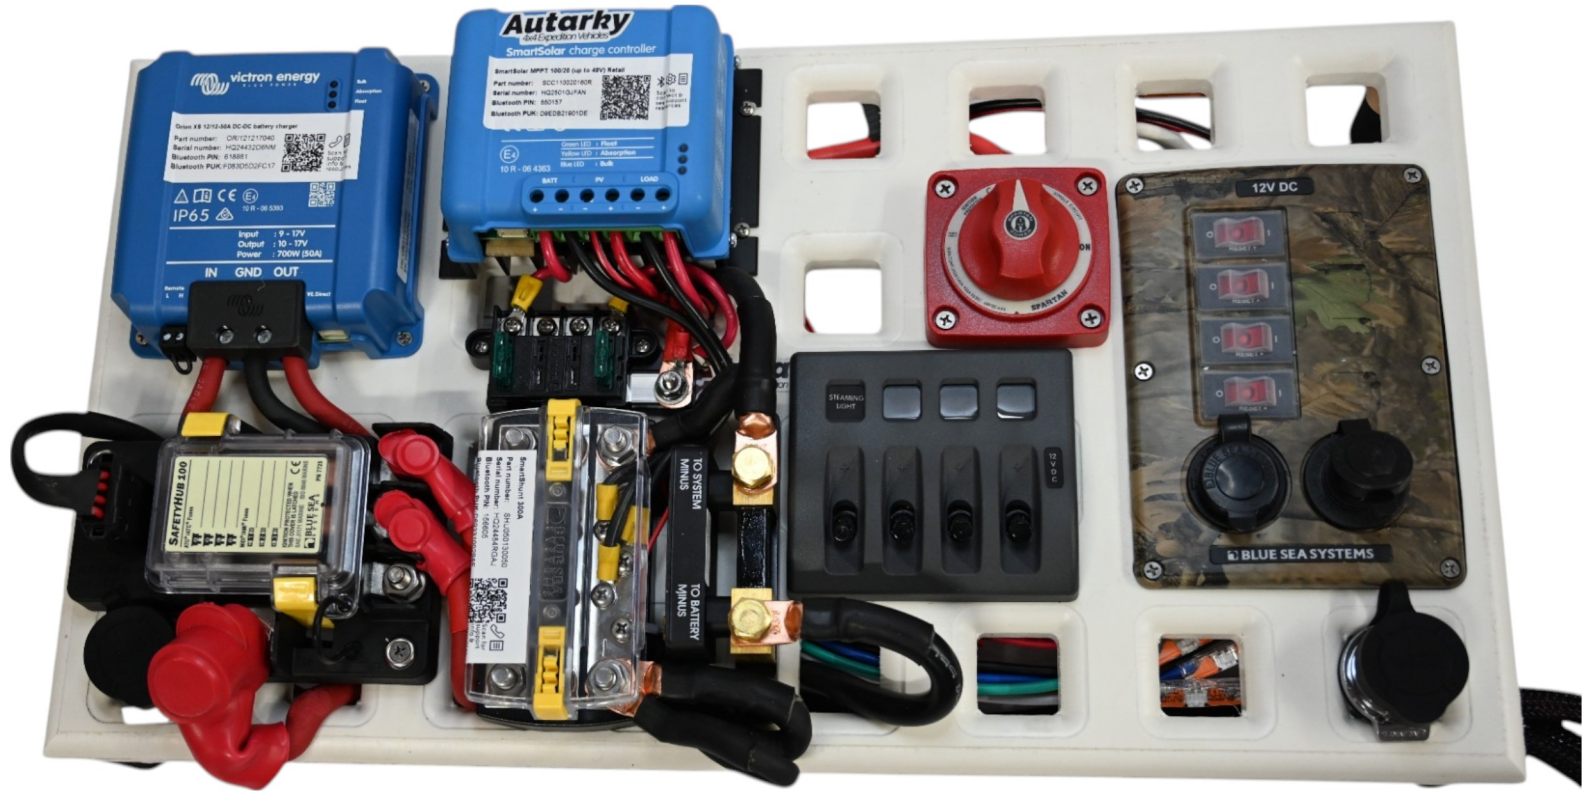

Built by ABYC-certified experts with years of global travel experience, the Nova system redefines what's possible in mobile power. By combining advanced electrical engineering with world-renowned components from Victron Energy, we've created a plug-and-play solution that brings professional-grade performance to any vehicle platform.

The Nova's clean design and efficient layout leverage our in-house wiring techniques and cable management system to deliver unmatched reliability and serviceability. Despite its power and functionality, the Nova occupies an impressively small 12" x 22" footprint — one of the smallest in the industry. This ultra-compact form factor maximizes usable space in your rig, giving you more room for storage, systems, or simply more adventure.

Experience the future of mobile power — engineered for reliability, designed for independence, and built to go anywhere.
